

X Microbe Plus

Comprehensive support of immune and digestive functions

X Microbe Plus contains a combination of herbal extracts with a long history of use for supporting the immune and digestive functions as well as the elimination of unwanted microorganisms while helping to maintain proper immune system and G.I. tract functions.*

The gut microbiome — or the community of beneficial bacteria, fungi, yeast, and other microbes that live in our gut — plays an essential role in health, as it affects metabolism, nutrient absorption, and immune function. The gut microbes ferment foods, help prevent the growth of harmful bacteria, work to manufacture hormones and neurotransmitters, and produce certain vitamins.

Aging, exposure to antibiotics, poor diet, and stress may potentially disrupt the microbial balance in the gut. A healthy and balanced gut ecosystem is important for the proper functioning of the gut microbiome in the GI system. The ingredients in **X Microbe Plus** work synergistically to help support a normal balance in the gut microbiome.*

Comprehensive support of immune and digestive functions

Artemisinin (Artemisia annua; Sweet Wormwood): Artemisinin is derived from the inner bark of the Artemisia annua tree. Its common name was dubbed “wormwood,” owing to its noted ability to kill parasitic worms. This compound has long been used as an antimalarial and is effective against other parasites that induce GI symptoms, as well as against various pathogenic bacteria and fungi, and a range of viruses including human cytomegalovirus, Epstein-Barr, herpes simplex type 1, and hepatitis B and C.

Black Walnut Extract (Juglans nigra): This ingredient has a long history of use as an intestinal antiparasitic (vermifuge, anthelmintic) in botanical medicine. It also possesses activity against common bacterial and fungal pathogens that occur in GI dysbiosis. At least six distinct bioactive compounds with antibacterial effects have been identified in black walnut, some of which are also antiviral, antifungal, and antiparasitic/antiprotozoal. Black walnut extract also has potent anti-inflammatory effects and was shown to inhibit the secretion of several inflammatory cytokines in cultured human promonocytes.

Olive (Olea europaea) Leaf Extract: yielding oleuropein, supports antioxidant and immune system functions within the body. Olive Leaf Extract has been used traditionally to help the body eliminate unwanted microorganisms.

Pau D’Arco: supports the healthy functioning of the digestive, respiratory, immune, and circulatory systems. They help support detoxification within the body and help decrease the levels of unwanted microorganisms within the body. They also support healthy cell functions and help regulate internal processes within normal ranges.
